EDUCATION

University of Illinois Chicago

Expected: May 2027

Bachelor of Science in Computer Science

GPA: 4.0 / 4.0

- **Awards:** Dean's List, Remarkable Futures Scholarship
- **Relevant Coursework:** Data Structures, Software Design, Systems Programming, Machine Organization, Computer Design, Languages and Automata, Programming Language Design and Implementation

TECHNICAL SKILLS

Languages: C, C++, CSS, HTML, JavaScript, TypeScript, Python, Java, Go

Technologies: Flask, Git, Google Cloud, Linux, MySQL, PyQt6, Pydub, React, Tailwind CSS, FastAPI, Docker, Elasticsearch, CrewAI

EXPERIENCE

JPMorgan Chase

Chicago, IL

Software Engineer Intern

June 2026 - August 2026

- Developed a multi-agent observability system using Python and Amazon Bedrock, designing an orchestrator architecture that intelligently routes complex system queries to specialized sub-agents.
- Integrated Model Context Protocol (MCP) to connect deployed agents with enterprise telemetry and version control systems, implementing a localized RAG workflow utilizing embedding models to retrieve diagnostic data from a vector store for automated error resolution.
- Deployed the containerized application to Amazon EKS using Spinnaker, implementing standard unit tests to verify core agent logic.
- Won 1st Place at the JPMC Global Hackathon (Chicago), and concurrently developed a full-stack web app (React, Java/Spring Boot) during an AI Challenge initiative focused on the effective leverage and proper use of AI tools.

Tech In Residence - AbbVie

Chicago, IL

SWE Student Participant

January 2026 - May 2026

- Engineered a multi-agent AI system to automate the generation of complex competitive intelligence reports, significantly reducing manual analysis time.
- Partnered with corporate stakeholders to identify system requirements, interview subject matter experts, and translate high-level business needs into technical objectives.
- Presented project milestones and insights to diverse teams, ensuring technical concepts are accessible and actionable for non-technical leadership.

SEO TECH Developer Program

New York, NY - Remote

SEO Tech Developer Intern

June 2025 - August 2025

- Collaborated in Agile teams of 5 to design, build, and test full-stack applications.
- Managed development workflow using SCRUM-like sprints and Kanban boards.
- Developed BookKeep, a full-stack web app that helps users track reading goals and discover books, using Flask, SQLite, React, and APIs like Open Library and ZenQuotes.
- Implemented RESTful API endpoints and database schemas to support user authentication, data persistence, and real-time content updates.

University of Illinois Chicago

Chicago, IL

IT Specialist Intern

June 2024 - August 2024

- Developed a Python desktop app with PyQt6 to help faculty capture, structure, and retrieve institutional knowledge.
- Integrated Google Cloud Speech and Pydub for high-accuracy audio-to-text transcription.
- Leveraged Gemini and Groq LLMs to generate context-aware summaries and knowledge bases.
- Collaborated with professors to gather feedback and iterated on the design to enhance usability and functionality.

PROJECTS AND HACKATHONS

JPMorgan's Code For Good Hackathon

Technologies: React, TypeScript, Python, Gemini API, MongoDB, MUI, TailwindCSS

November 2025

- Selected from a pool of 12,000 applicants to design and develop a technology solution for a non-profit organization in a 24-hour sprint.
- Architected and implemented a functional, full-stack transparency platform for donor retention using React, TypeScript, Python, and MongoDB.
- Utilized Gemini LLM to automate data parsing from reports, powering personalized email templates that detailed donor statistics and streamlined non-profit operations.

NASA Space Apps Chicago Hackathon

October 2025

Technologies: React, TypeScript, Python, Flask, Google Maps API, AppEEARS API, Elasticsearch

- Developed backend infrastructure for a web application, helping users identify optimal plant blooming seasons based on geographic location.
- Worked in a team of 5 to query and process complex NASA public data sets, then integrated the data with the Google Maps API for geospatial plotting.
- Utilized Python to manage data processing and analysis within a fast-paced, sprint-like environment, successfully presenting the solution prototype to judges.

AutoGit | Personal Project

September 2025

Technologies: Python, Git, Groq API

- Built a Python command-line tool that automates Git workflow by intelligently generating commit messages from code differences using large language model integration.
